Strategy Overview

Seeks to provide the benefits of broad diversification through risk-managed asset allocation strategies across a range of risk-return profiles.

Strategy Summary

In asset categories where active management offers minimal alpha, passive ETF's are used. Inverse or short-biased exchange traded funds (ETFs), cash or long ETF equity positions are utilized to scale equity exposure within a range for each model, which shifts fixed income net exposure conversely.

Strategy Structure

The strategy invests in actively managed mutual funds and passive ETFs across five models that range from conservative to growth.

Each model seeks to provide exposure to nine asset classes to mitigate risk, including US equities, foreign developed equities, emerging market equities, fixed income, real estate investment trusts (REITS), master limited partnerships, commodities, alternatives, and cash.

The mutual funds are selected through proprietary research designed to identify managers that have historically generated returns above their respective benchmarks (manager "alpha").

STRATEGY INFORMATION

Inception: August 1, 2015

Category: Allocation - 70% to 85% Equity

Vineyard Global Advisors is a dba of Integrated Advisors Network, LLC, a registered investment adviser. This presentation is not an offer to sell, or the solicitation of an offer to purchase, any investment managed or sponsored by Vineyard Global Advisors or any of its affiliated entities (collectively, "VGA"). The indexes shown are provided for illustrative purposes only, are unmanaged, reflects the reinvestment of income and dividends, and does not reflect the impact of advisory fees. Investors cannot invest directly in an index. Comparisons to indices have limitations because indices have volatility and other material characteristics that may differ from a particular

VGA strategy. VGA's performance may differ substantially from the performance of an index. In addition, data used in the benchmark are obtained from sources considered to be reliable, but VGA makes no representations or guarantees with regard to the accuracy of such data.

Past performance is not representative of future return performance. The net returns are based on the returns reduced by the management fee. The returns include the reinvestment of dividends, interest and other earnings. The information provided was calculated by a third-party and has not been audited for accuracy. Actual performance results may differ from composite returns, depending on the size of the account, investment guidelines and /or restrictions, inception date and other factors. As with all investments, there are certain risks of investing, you could lose money investing in these financial products. Consult a financial expert to understand your risk tolerance and investment goals. Investments in equity, fixed income, and derivative securities carry risk, including but not limited to interest rate risk, inflation risk, credit risk, regulatory risk, company specific risk, and market environment risk.

Due to various risks and uncertainties, actual events, results or the actual performance of the investment may differ materially from those reflected or contemplated in the returns presented within. While assumptions underlying various statements as to the future performance are believed to be reasonable in nature, prospective investors should make their own assessments as to such assumptions and the associated risks, including the likelihood of the strategy achieving the corresponding results. All of which are subject to risks and uncertainties many of which are beyond the control of the investment adviser. As such, no assurance is given as to the realization of any such future performance. No representation or warranty is made as to the future performance or such forward-looking statements. The delivery of this presentation does not imply that any other information contained herein is correct as of any time subsequent to the presentation date.

These materials contained confidential and proprietary information and have been provided with the express understanding that their distribution or the divulgence of any of their contents to any person, other than the person(s) to whom they were originally delivered and such person's advisors, without the prior consent of VGA or Integrated Advisors Network is prohibited.

Benchmark Details

Benchmark - Qualified is a blend of the asset classes utilized by the VGA Allocation Plus 70/30 - Qualified strategy. The specific indices used in calculating the neutral benchmark include; Alerian MLP Index (2.8%), Bloomberg U.S. Aggregate Bond Index (28.5%), Bloomberg Commodity Index (1.4%), Citigroup 1-Month Treasury Bill Index (1.5%), HFRI Emerging Markets Index (4.9%), HFRX Global Hedge Fund Index (4.2%), MSCI EAFE Index (4.9%), Russell 2000 Index (7%), Russell 3000 Value Index (16.8%), S&P 500 Index (14%), S&P MidCap 400 Index (14%).

Date of benchmark change: October 1st, 2017

Description of change: The benchmark shown, "Allocation Plus 70/30 Neutral Benchmark - Qualified", is a blend of the asset classes utilized by the VGA Allocation Plus 70/30 - Qualified (net) strategy. The specific indices used in calculating the neutral benchmark include; Alerian MLP Index (2.8%), Bloomberg Barclays U.S. Aggregate Bond Index (28.5%), Bloomberg Commodity Index (1.4%), Citigroup 1-Month Treasury Bill Index (1.5%), HFRI Emerging Markets Index (4.9%), HFRX Global Hedge Fund Index (4.2%), MSCI EAFE Index (4.9%), Russell 2000 Index (7%), Russell 3000 Value Index (16.8%), S&P 500 Index (14%), S&P MidCap 400 Index (14%). The benchmarks previously utilized for comparison to the strategy consisted of the following; Bloomberg Barclays 1-5 Year Gov / Credit Total Return Index (30%), MSCI AWCI Index (70%).

Reason for change: The modification of the benchmark was done to better reflect the asset classes utilized in the strategy.

Benchmark - Taxable is a blend of the asset classes utilized by the VGA Allocation Plus 70/30 - Taxable strategy. The specific indices used in calculating the neutral benchmark include; Alerian MLP Index (2.8%), Bloomberg Municipal Bond Index (28.5%), Bloomberg Commodity Index (1.4%), Citigroup 1-Month Treasury Bill Index (1.5%), HFRI Emerging Markets Index (4.9%), HFRX Global Hedge Fund Index (4.2%), MSCI EAFE Index (4.9%), Russell 2000 Index (7%), Russell 3000 Value Index (16.8%), S&P 500 Index (14%), S&P MidCap 400 Index (14%).

Date of benchmark change: October 1st, 2017

Description of change: The benchmark shown, "Allocation Plus 70/30 Neutral Benchmark - Taxable", is a blend of the asset classes utilized by the VGA Allocation Plus 70/30 - Taxable (net) strategy. The specific indices used in calculating the neutral benchmark include; Alerian MLP Index (2.8%), Bloomberg Barclays Municipal Bond Index (28.5%), Bloomberg Commodity Index (1.4%), Citigroup 1-Month Treasury Bill Index (1.5%), HFRI Emerging Markets Index (4.9%), HFRX Global Hedge Fund Index (4.2%), MSCI EAFE Index (4.9%), Russell 2000 Index (7%), Russell 3000 Value Index (16.8%), S&P 500 Index (14%), S&P MidCap 400 Index (14%). The benchmarks previously utilized for comparison to the strategy consisted of the following; Bloomberg Barclays Municipal Bond 5 Year Index (30%), MSCI ACWI Index (70%).

Reason for change: The modification of the benchmark was done to better reflect the asset classes utilized in the strategy.

Morningstar US SA Allocation – 70% to 85% Equity: Funds in allocation categories seek to provide both income and capital appreciation by primarily investing in multiple asset classes, including stocks, bonds, and cash. These moderately aggressive strategies prioritize capital appreciation over preservation. They typically expect volatility similar to a strategic equity exposure between 70% and 85%.

Definitions

Standard Deviation: statistical measure of volatility used as an indicator of the 'risk' associated with a return series. Standard deviation of return measures the average deviations of a return series from its mean.

Information Ratio: measure of the consistency of excess returns, the information ratio of a manager series vs. a benchmark series is the quotient of the annualized excess return and the annualized standard deviation of excess return.

Significance Level: significance level of a manager series vs. a benchmark series indicates the level of confidence with which the statement " the manager's annualized excess return over the benchmark is positive" or " the manager's annualized excess return over the benchmark is negative," as the case may be, holds true. A manager with consistent under- or over-performance compared to its benchmark over a long period of time would have a high significance level.

Explained Variance: any variance in the difference between manager and style benchmark represents a failure of the style benchmark variance to explain the manager variance. Hence, the quotient of variance of excess return over variance of manager represents the unexplained variance. The variance explained is 1 minus the unexplained variance.

Beta: represents the systematic risk of a portfolio and measures its sensitivity to a benchmark. A portfolio with a beta of one is considered to be as risky as the benchmark and would therefore provide expected returns equal to those of the market benchmark during both up and down periods.

Alpha: measure of risk (beta)-adjusted return. Alpha measures the difference between a portfolio's actual returns and what it might be expected to deliver based on its level of risk.

R-Squared: provides a measure of how closely two portfolios track each other. Specifically, the R-squared of a manager versus a benchmark is a measure of how closely related the variance of the manager returns are with the variance of the benchmark returns. The higher the R-squared, the more appropriate the benchmark.

Sharpe Ratio: measure of reward per unit of risk, where standard deviation represents risk. The higher the Sharpe ratio, the better.

Up Capture / Down Capture: measures how well a manager was able to replicate or improve on phases of positive benchmark returns and how badly the manager was affected by phases of negative benchmark returns.

Sortino Ratio: analog to the Sharpe ratio, with the standard deviation replaced by the downside deviation.

Max drawdown length: number of months used in the sub-period to calculate the maximum drawdown.

Max drawdown recovery length: number of periods it takes to reach the recovery level from maximum drawdown end date.

Max Drawdown: maximum loss (compounded, not annualized) that the manager incurred during any sub-period of the entire time period. Conceptually, this is the biggest " peak to trough" loss.

Gain to loss ratio: ratio of the average monthly gain in an up period to the average monthly loss in a down period.

Pain Index: represents the frequency, the depth, and the width of the manager's drawdowns. The pain index is an attempt to capture in one single number as much of the information that is contained in the drawdown graph as possible. The lower the pain index, the better.

Pain Ratio: The pain ratio is a risk-return ratio which uses the pain index as the measure of risk. The higher the pain ratio, the better.
